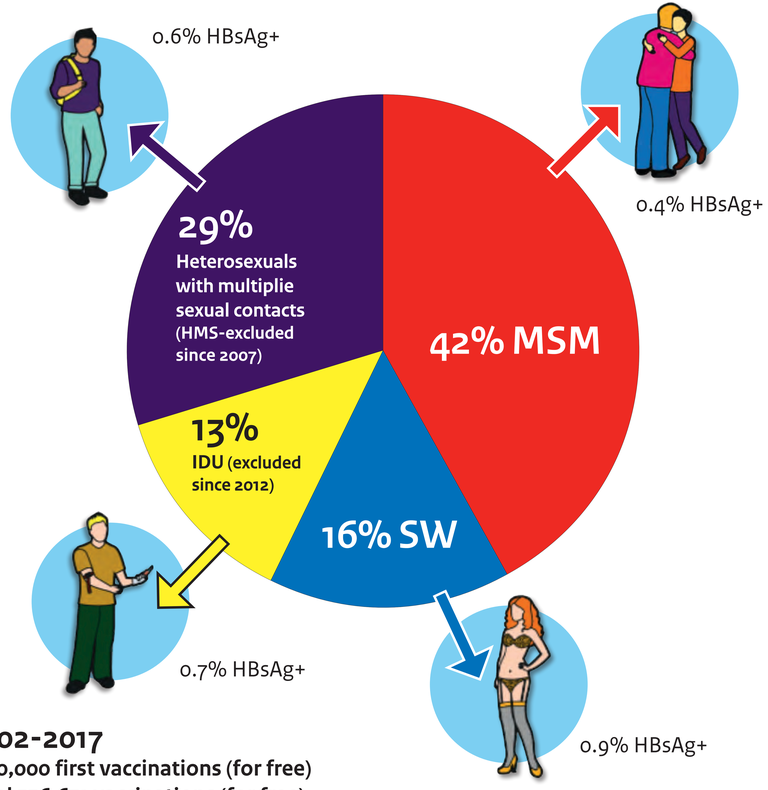
Results of a 15-year targeted HBV-vaccination program for high behavioral risk groups

A.T. Urbanus, A.E. Meiberg, W.LM. Ruijs. E-mail: hbvprogramma@rivm.nl

HBV-program overview

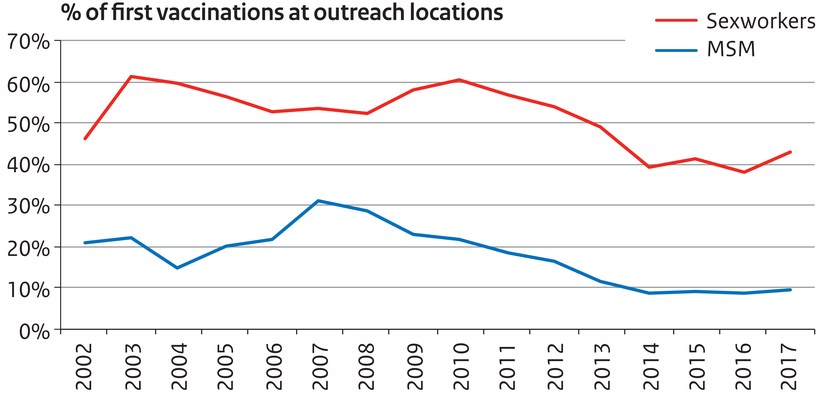


2002-2017
>140,000 first vaccinations (for free)
Total 336,671 vaccinations (for free)

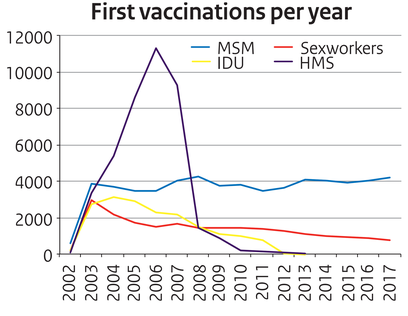
Methods

1. Targeted online and offline campaigns
- www.mantotman.nl
- www.itsmyliver.nl

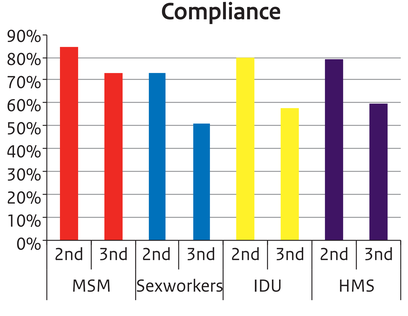
2. Outreach
- Sauna's
- Brothels
- STI-clinics
- Methadone-clinics
- Online chat/bannering



Results



In total 1604 double dose vaccinations among HIV-positives (96% MSM) since 2012



For additional information about strategies see poster: WEPEE609

Conclusions

- Risk groups are increasingly approached online in order to improve efficiency.
- Although less cost-effective over the last years, still each year about 4,000 MSM and 1,000 CSW sexworkers receive their first HBV-vaccination.
- Commitment and creativity of healthcare professionals are essential for succes.
