

CODAN Chemoprotect®

Complete protection in
preparation of cytotoxic drugs

CODAN Chemoprotect®

The CODAN Chemoprotect® product range offers safe and reliable protection of personnel in the handling of cytotoxic drugs. The combined use of specially matched individual products considerably minimizes the risk of contaminations in the regular handling of cytotoxic drugs, as well as in the event of accidents (spills). Chemoprotect® is the perfect addition to CODAN CYTO® products for the preparation and administration of cytotoxic drugs.

The exceptional reliability of the Chemoprotect® system is confirmed by the certification of the most important products as Personal Protective Equipment (PPE) according to the European Directive 89/686/EEC.

Chemoprotect® Latex-free protective gloves

Precise work with maximum protection

The new latex-free Chemoprotect® protective gloves offer reliable protection in the handling of cytotoxic drugs. They are distinguished by their close fit and excellent sensory properties resulting from different thicknesses of the thin material in the various areas of the gloves.

These Latex-free gloves are made of neoprene (polychloroprene) and are provided with an optimal chemical barrier. As a result, they also offer allergy sufferers excellent wearing convenience. Despite their long cuffs, a special inner lining allows easy fitting and removal of the gloves even without powder.

Chemoprotect® protective gloves are certified as Personal Protective Equipment (PPE) according to the European Directive 89/686/EEC. They are available sterile or unsterile in four glove sizes from XS to L.

- No allergy risk
- Optimal chemical barrier
- Excellent sensory properties
- Well-fitting
- Long glove cuffs
- Fast and easy fitting and removal
- Polycoated inner lining
- Individually packed in pairs either sterile or unsterile
- Dispenser appropriate for wards

Chemoprotect® Workplace cover

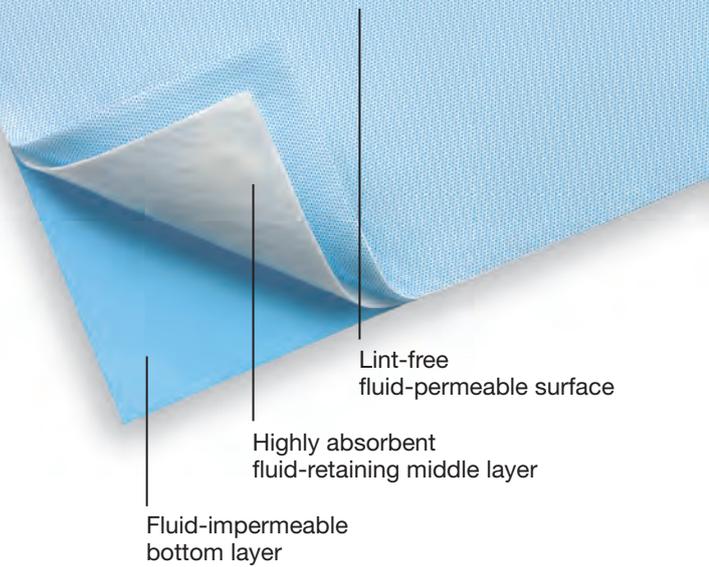

Safe base

The Chemoprotect® workplace cover has been specially developed for cytotoxic drug preparation. The three-layer structure of the material allows safe working and risk-free subsequent disposal. The cover is available sterile or unsterile in two sizes for most workplace dimensions.

Dimensions:

Large Workplace Cover: 41 x 54 cm

Small Workplace Cover: 27 x 42 cm

Chemoprotect® Arm sleeves

Proven alternative

The preferred use of Chemoprotect® arm sleeves has proven successful in some workplaces. With regard to their material and processing properties they are identical to the Chemoprotect® protective gown. An elastic rubber cuff at the upper end provides a safe and comfortable fit with very good freedom of movement.

The handy Chemoprotect® bag with a safe-seal closure is ideal for the transport of medication to the ward and is also excellent for the disposal of substances. The bags are available in transparent as well as in white (for light-sensitive cytotoxic drugs).

Chemoprotect® Spill Box

The complete accident set

With the Chemoprotect® Spill Box, CODAN offers a complete system for immediate and effective contamination protection in the event of accidents with cytotoxic drugs.

Alongside a complete Personal Protective Equipment (PPE) for the user, the Chemoprotect® Spill Box contains all necessary equipment for the disposal of contaminated objects and for the safe initial cleaning of contaminated surfaces.

The PPE products in the Chemoprotect® Spill Box consist of a Chemoprotect® Protective Gown, Chemoprotect® Gloves in two sizes, sturdy over-gloves and overshoes, protective goggles along with a respiratory protection mask for reliable protection.

Barricade tape and warning signs are used to safeguard the accident location. A special powder binds the spilled substances which can then be removed with special cloths, wipers and shovels and can subsequently be disposed of together with all contaminated objects in specially labelled bags and containers. In the event of ampoule glass breakage, the debris and fluid can be removed with cotton wool and tweezers.

Chemoprotect® Spill Box:

- Emergency instructions
- Chemoprotect® protective gown
- Chemoprotect® protective gloves (2 sizes)
- Respiratory protection mask
- Protective goggles
- Overgloves
- Overshoes
- Warning notices
- Barricade tape
- Green-Z powder
- Tweezers
- Cotton wool
- Powersorb wiping cloths
- Rubber wiper
- Receptacle
- Chemoprotect® waste bag
- Cable ties
- Disposal box

Chemoprotect® Protective gown

Practical safety precautions

The greatest possible user protection in the handling of cytotoxic drugs is guaranteed by the Chemoprotect® protective gown. It is certified as Personal Protective Equipment (PPE) according to the European Directive 89/686/EEC.

The fluid-impermeable coating of the front of the gown and sleeves plus the extra heat-sealed seams provide reliable safety. The elasticated arm cuffs are hypoallergenic (diazo-free) and offer a safe transition to protective gloves.

The Chemoprotect® protective gown is available either sterile or unsterile and in both cases in three sizes (S/M, L, XL). The lint-free material with good breathing properties and a comfortable cut ensure high wearing convenience.

CODAN is internationally known as a manufacturer and supplier of disposable medical administration systems. The CODAN Companies worldwide employ more than 1,500 people.

The name CODAN represents reliability, quality and precision supported by the knowledge and experience of more than 50 years of research and development. Our worldwide production facilities and sales organisations deliver first class service to all our customers in the healthcare sector.
