The Technical Cooperation Programme (TCP) was launched in 1976 and is a part of FAO's Regular Programme, financed from the assessed contributions of its Members.

The Programme aims to provide FAO's technical expertise to its Member countries through targeted, short term, catalytic projects. These projects address technical problems in the field of agriculture, fisheries, forestry and rural livelihood that prevent Member countries, either individually or collectively, from implementing their development programmes. The TCP may be used in all areas of action that pertain to FAO's mandate and competence and which are covered by the Organization's Strategic Framework.

TCP projects should produce tangible and immediate results in a cost-effective manner. They support improved food security and poverty alleviation, and should catalyse long-term development changes.

The TCP is one of FAO's tools for contributing to the achievement of the **UN Millennium Development Goals** and particularly the goal of eradicating extreme poverty and hunger.

Since its creation in 1976, the TCP has funded projects worth more than US\$ 1.3 billion as at 31 December 2009.

Up to December 2009, the TCP was managed by the FAO's Technical Cooperation (TC) Department and coordinated by the TCP Service (TCOT). In January 2010, a large share of the responsibility for TCP management was transferred from the FAO's headquarters to the FAO's decentralized offices. Thus, the responsibilities for the tasks of the decentralized TCP process are shared among the Technical Cooperation (TC) Department, FAO's Regional, Subregional and Country Offices (for more information see the FAO section of this Web

Standards and Trade Development Facility

The website is under reconstruction and will be updated in January 2008.

All enquiries should be addressed to STDFsecretariat@wto.org in the interim.

The Standards and Trade Development Facility (STDF) is a pilot programme in capacity building and technical co-operation established by the Food and Agriculture Organization of the United Nations (FAO), the World Organization for Animal Health (OIE), the World Bank, the World Health Organization (WHO) and the World Trade Organization (WTO).

The strategic aims of the STDF are:

- to assist developing countries enhance their expertise and capacity to analyze and to implement international sanitary and phytosanitary (SPS) standards, improving their human, animal and plant health situation, and thus ability to gain and maintain market access; and
- to act as a vehicle for co-ordination among technical co-operation providers, the mobilization of funds, the exchange of experience and the dissemination of good practice in relation to the provision and receipt of SPS-related technical co-operation.

In addition to facilitating international trade, SPS capacity building can result in improved human and agricultural health conditions for local markets and so favour economic and social development.

In achieving its aims, the STDF acts both as a co-ordinating and a financing mechanism.
