Subject: Result from the bowel cancer population screening

«_CLIENT_AANHEF»,

You participated in the bowel cancer population screening. In this letter we give you the result.

No follow-up examination is needed

We did not find blood in your stool. If you are not yet 75 years old in two years, you will receive another invitation for the population screening.

Like every medical examination, the population screening does not provide 100% certainty. There is always a chance that bowel cancer will not be detected. You can read more information about this on www.bevolkingsonderzoekdarmkanker.nl.

Go to your GP if you have intestinal complaints

Do you see blood in your stool? Or do you have intestinal complaints? For example, have you been suffering from constipation or diarrhoea for a long time without a clear cause? Do not wait for the next invitation for the population screening and make an appointment with your GP.

Do you have any questions?

You can find answers to frequently asked questions on www.bevolkingsonderzoekdarmkanker.nl. If you have any other questions about the population screening, you can call «_SO_NAAM» via telephone number «_SO_TEL_DK» («_SO_OPENINGSTIJDEN_TEKST_DK»). Do you have questions about your health? If so, please contact your GP.

Sincerely,

On behalf of «_SO_NAAM»,
