* The numbers for the Alpha variant with E484K mutation are included in the total numbers for the Alpha variant (B.1.1.7).

Pathogen surveillance data is updated weekly. New reports may be added up to and including week 33 of 2021 from the submissions provided by the (current and new) laboratories participating in pathogen surveillance. In any case, the figures for week 34 are not yet complete. In addition, numbers per week may differ from previous publications due to updates of sample collection dates or reclassification of the sample in the registration system (source and contact tracing instead of random sampling). These weekly figures are updated retroactively.

** As of 6 July 2021, the World Health Organization (WHO) has removed P.2 (Zeta), P.3 (Theta) and B.1.427/4.29 (Epsilon) from the Variants of Interest (VOI) list. For that reason, P.2 (Zeta) is no longer included in the overview. Variants P.3 and B.1.427/4.29 are still in the table, since they are still on the VOI list maintained by the European Centre for Disease Control (ECDC). With the removal of these three variants from the WHO VOI list, the designations for Epsilon, Theta and Zeta are no longer included. B.1.616, B.1.427/429 (Epsilon) en P.3 (Theta) are removed by the WHO and ECDC.
