

Epidemiological report of SARS-CoV-2 on the Dutch Caribbean CAS- and BES-islands:

Week 41 (October 7-13, 2021)

Produced by the National Institute for Public Health and the Environment of the Netherlands - RIVM
14 October 2021, 19:00 pm AST

For general information on surveillance of COVID-19 on the CAS-BES-islands, see the next page.

Summary

In the week of October 7-13, 2021, 447 people in the CAS and BES islands received a positive test result, similar to the number of reported infections in week 40. No new SARS-CoV-2 infections were reported on Saba and Sint Eustatius last week. Genomic surveillance shows the Delta variant remains dominant on all islands (week 39).

The steady decline in the detected SARS-CoV-2 infections on Aruba continues. Last week, 82 people per 100,000 inhabitants in Aruba received a positive SARS-CoV-2 test result, compared to 85/100,000 a week earlier (September 30 – October 6). The declining trend is not yet visible in the hospital occupancy. There are currently 30 COVID-19 patients admitted, of which 6 in the nursing ward in Aruba, 6 in the ICU in Aruba, and 18 in the ICU in Colombia.

Last week, 457 people per 100,000 inhabitants on Bonaire received a positive SARS-CoV-2 test result, a slight increase from 423/100,000 a week earlier (September 30 – October 6). The share of positive tests has decreased slightly in the past week, from 17.0% to 13.4%. Hospital occupancy has increased quickly over the past week(s). Currently there are 7 COVID-19 patients admitted, 3 of which are in Special Care. The amount of new admissions has placed pressure on the local care capacity, but it is currently considered as under control.

Last week, 111 people per 100,000 inhabitants in Curaçao received a positive SARS-CoV-2 test result, a decrease compared to 133/100,000 a week earlier (September 30 – October 6). The number of COVID-19-related admissions is increasing again. There are currently 23 COVID-19 patients, 7 of which are in the ICU. Between July 22 and October 11, 2021, 194 people were admitted to the local hospital with/due to COVID-19. Of these, 181 (93%) were unvaccinated.

Last week, 90 people per 100,000 inhabitants in Sint Maarten received a positive SARS-CoV-2 test result, a decrease compared to 148/100,000 a week earlier (September 30 – October 6). The number of new COVID-related hospital admissions is decreasing, but the number of occupied ICU beds continues to fluctuate. There are currently 6 COVID-19 patients admitted, 4 of which are in the ICU, and 1 overseas admission from St Eustatius. On the French side of the island, the incidence and positivity rate are rising (110/100,000 and 3.0% at week 39, respectively).

Information on surveillance of COVID-19 on the CAS- and BES-islands

The Caribbean part of the Kingdom of the Netherlands entails the countries Curaçao, Aruba, and Dutch St Maarten (CAS-islands), as well as the overseas municipalities Bonaire, St Eustatius, and Saba (BES-islands). Surveillance data of SARS-CoV-2 cases is collected on each island in collaboration with local medical professionals, laboratories, and public health departments. These surveillance data are shared by the CAS- and BES-islands through daily updates and stored in the SARS-CoV-2 IHR Daily Overview Dutch Caribbean; an overview of the spread of SARS-CoV-2 on the CAS- and BES-islands.

This report has been generated using surveillance data registered at the RIVM between March 22nd 2020 and 13 October 2021. Sometimes surveillance data is reported to the RIVM one or multiple days later than documented on the islands. The data presented in this report are based on the date of registration at the RIVM. Because islands retrospectively correct surveillance data, the crude estimates in this report may differ slightly from the data shared by each island. The data reported here may lag behind in case more recent data has not yet been reported to the RIVM by respective islands.

Everyone with symptoms of COVID-19 can get tested. However, it is plausible that not all individuals with a SARS-CoV-2 infection are tested. The actual numbers of cases can therefore be higher than the numbers reported here. The CAS- and BES-islands also register when individuals with a positive SARS-CoV-2 test result have recovered. These data are used to report the current number of active cases in Table 3. The number of active cases refers to the number of individuals who tested positive for SARS-CoV-2 and who have not yet recovered at the time of producing this report.

Information on monitoring of COVID-19 vaccination on the CAS and BES islands

The COVID-19 vaccination campaign on the CAS-BES islands started in February 2021. Each island has their own vaccination campaign. The actual implementation of these vaccination campaigns depends on, among other things, the approval, operation, delivery and distribution of the vaccines, and on people's willingness to vaccinate. In this document we report the estimated total number of vaccinated persons and the vaccination coverage on the CAS-BES islands. The current report is based on data on vaccinations administered up to and including 13 October 2021 using monitoring data received from the Dutch Ministry of Health (VWS).

Disclaimer

Though this weekly report has been produced with the utmost care, it could possibly contain errors. Feedback on this overview is welcome.

1 Overview of reported SARS-CoV-2 cases on the CAS- and BES-islands

Table 1: Number of laboratory confirmed cases with a positive test result for SARS-CoV-2 over the past 2 weeks, as reported to the RIVM by the CAS- and BES-islands

Island	Date: from-until	Number of performed tests	Number of laboratory confirmed tests with positive test result	Positivity rate %
Aruba ¹	27-09-2021 - 03-10-2021	5207	120	2.3
	04-10-2021 - 10-10-2021	2240	98	4.4
Bonaire	27-09-2021 - 03-10-2021	701	119	17
	04-10-2021 - 10-10-2021	703	94	13.4
Curaçao ²	27-09-2021 - 03-10-2021	12350	236	1.9
	04-10-2021 - 10-10-2021	12481	178	1.4
Saba ³	27-09-2021 - 03-10-2021	-	0	-
	04-10-2021 - 10-10-2021	-	0	-
Sint Eustatius	27-09-2021 - 03-10-2021	103	3	2.9
	04-10-2021 - 10-10-2021	146	0	0
Sint Maarten ⁴	27-09-2021 - 03-10-2021	-	-	-
	04-10-2021 - 10-10-2021	-	82	-

¹ This estimate concerns a crude positivity rate for Aruba. The Directie Volksgezondheid Aruba reports a corrected positivity rate through: <https://www.facebook.com/desparuba>.

² The Public Health Department on Curaçao estimates a corrected positivity rate. Therefore, estimates presented here may differ from positivity rates reported by Curaçao.

³ A '-' value indicates insufficient data was reported to the RIVM to report in this table.

⁴ The positivity rate for Dutch St Maarten has been estimated using data of the PCR tests analyzed only. Therefore, estimates presented here may differ from positivity rates reported by Dutch St Maarten (SLS), as those include data of rapid antigen tests as well.

Table 2: Number of laboratory confirmed cases with a positive SARS-CoV-2 test result, number of hospital admissions¹ and number of deceased cases, cumulative and for the previous week, on the CAS- and BES-islands, as reported to RIVM

Island	Cumulative			Previous week ²	
	Number of cases	Hospital admissions	Deceased	Number of cases	Deceased
Aruba	15681	1078	170	103	2
Bonaire	2251	66	19	106	0
Curaçao	16866	744	169	182	1
Saba	11	1	0	0	0
Sint Eustatius	28	0	0	0	0
Sint Maarten	4431	241	70	56	2
Total	39268	2130	428	447	5

¹ The number of hospital admissions cannot be displayed for the previous week due to a delay in reporting these data. The current number of persons hospitalized due to or with COVID-19 is reported in Table 3.

² These have been reported to the RIVM between September 30th and October 6th, 2021.

Table 3: Current number of active SARS-CoV-2 cases and status of COVID-19 hospital occupancy on the CAS- and BES-islands, as reported to RIVM^{1,2}

Island	Number of active cases	Number of COVID-19 patients on general ward	Number of COVID-19 patients in the ICU	Oversees occupancy in Colombia	Oversees occupancy in the USA	Number of COVID-19 patients on OBGYN ward	Number of COVID-19 patients on pediatric ward
Aruba	180	6	6	18	0	0	0
Bonaire	135	4	3	0	0	0	0
Curaçao	315	16	7	0	0	0	0
Saba	0	0	0	0	0	0	0
Sint Eustatius	1	0	0	0	0	0	0
Sint Maarten	95	2	4	1	1	0	0
Total	726	28	20	19	1	0	0

¹ Number of active SARS-CoV-2 infections is defined as the number of persons with a SARS-CoV-2 infection of which the recovery has not been registered by the local public health department at the time of registration by the RIVM. These numbers can also be delayed if the contact tracing capacity at the public health department is limited.

² Per September 1, 2021, admissions to the OB/GYN and pediatric wards are reported separately for St Maarten. The other islands are currently not reporting these data separately.

³ Covid patients admitted to the Special Care unit on Bonaire are mentioned under the column ICU-local.

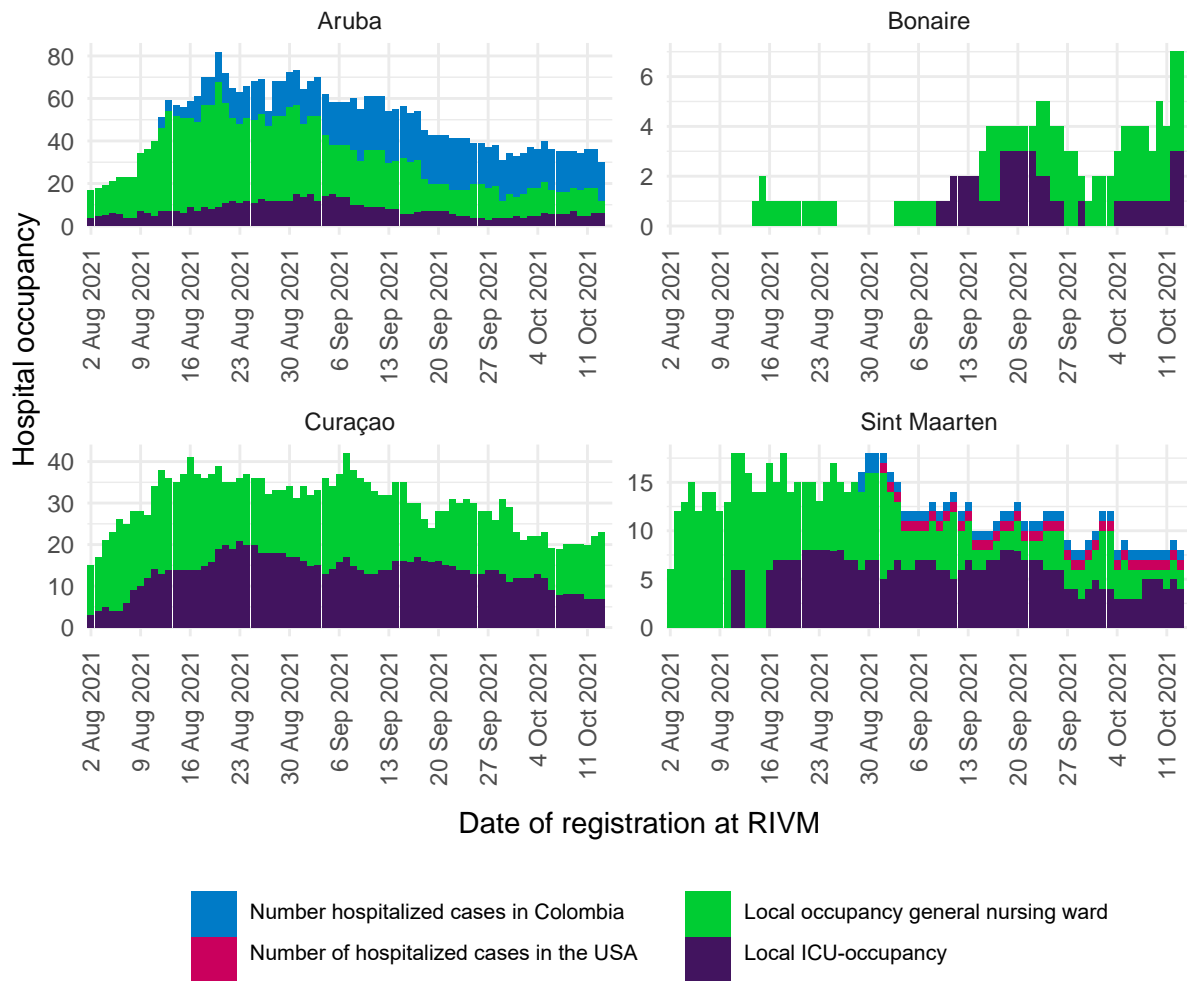

Figure 1: Progression of COVID-related hospital occupation over time ^{1,2,3,4,5}

¹ This figure presents the number of reported persons who have tested positive for SARS-CoV-2 during or before admission on the general hospital ward and/or ICU.

² The purple data represent the ICU-occupation over time, per island. The green data represent the occupation of the general hospital ward over time, per island.

³ Due to the low number of hospitalised patients on Saba en St Eustatius, these islands have not been included in this graph.

⁴ Based on the most recent data registered for Bonaire, the admission status is unknown for 234 persons who have tested positive for SARS-CoV-2 since January 1st, 2021. These cases have not been included in this graph.

⁵ The reported data has been presented by the date of reporting to the RIVM. These numbers can lag behind when the most recent data has not yet been reported to the RIVM.

Table 4: SARS-CoV-2 incidence rate per 100,000 residents on the CAS- and BES-islands¹, as reported to RIVM

Island	Incidence rate per 100,000 residents	
	Previous week ²	Previous two weeks ³
Aruba	82	186
Bonaire	457	938
Curaçao	111	257
Saba	0	0
Sint Eustatius	0	0
Sint Maarten	90	350

¹ The calculated incidence rates include the estimated number of undocumented migrants on each island, see Table 5.

² The incidence rate per 100,000 persons, for the previous week, has been calculated from 7 October 2021 until 13 October 2021.

³ The incidence rate per 100,000 residents, for the previous two weeks, has been calculated from 30 September 2021 until 13 October 2021.

Table 5: Number of residents and acreage of the CAS- and BES-islands¹

Island	Capital city	Residents	Acreage	Political status
Aruba	Oranjestad	125.282	180 km ²	Country within the Kingdom of The Netherlands
Bonaire	Kralendijk	23.173	288 km ²	Dutch municipality
Curaçao	Willemstad	164.223	444 km ²	Country within the Kingdom of The Netherlands
Saba	The Bottom	1.918	13 km ²	Dutch municipality
Sint Maarten	Philipsburg	62.323	34 km ²	Country within the Kingdom of The Netherlands
Sint Eustatius	Oranjestad	3.142	21 km ²	Dutch municipality

¹ These numbers refer to the 2021 population sizes. Each island counts a substantial population of undocumented migrants. The reported incidence rates include the estimated population of undocumented migrants. On Aruba, Curaçao, and Dutch St Maarten the population size is estimated to be between 8,000 and 20,000 migrants in 2021. On Bonaire the population size is estimated around 1,400 migrants. These data are relevant to include as these populations are difficult to reach for local public health services and often have less access to curative care.

2 SARS-CoV-2 progression over time

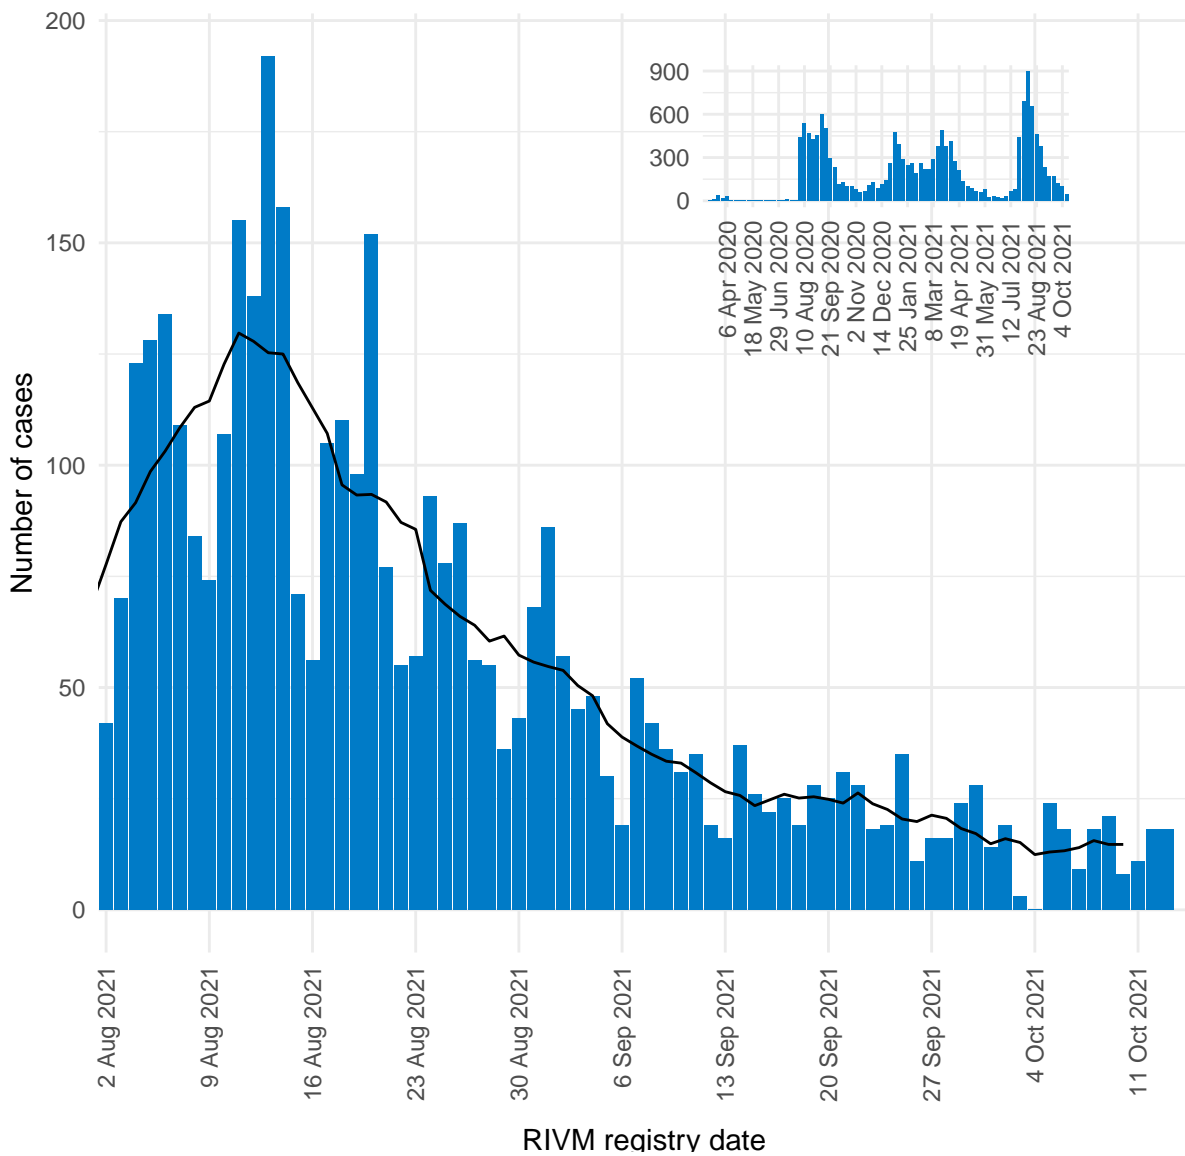

Figure 2: Number of daily reported SARS-CoV-2 cases on Aruba, presented by RIVM registry date^{1,2}.

¹ This figure displays the daily number of new SARS-CoV-2 by date of reporting to the RIVM. The black line represents the 7-day moving average of new infections. The vertical axes of figures 2-7 differ due to dissimilarities in the quantity of cases between the islands.

² The reported data has been presented by the date of reporting to the RIVM. These numbers can lag behind when the most recent data has not yet been reported to the RIVM.

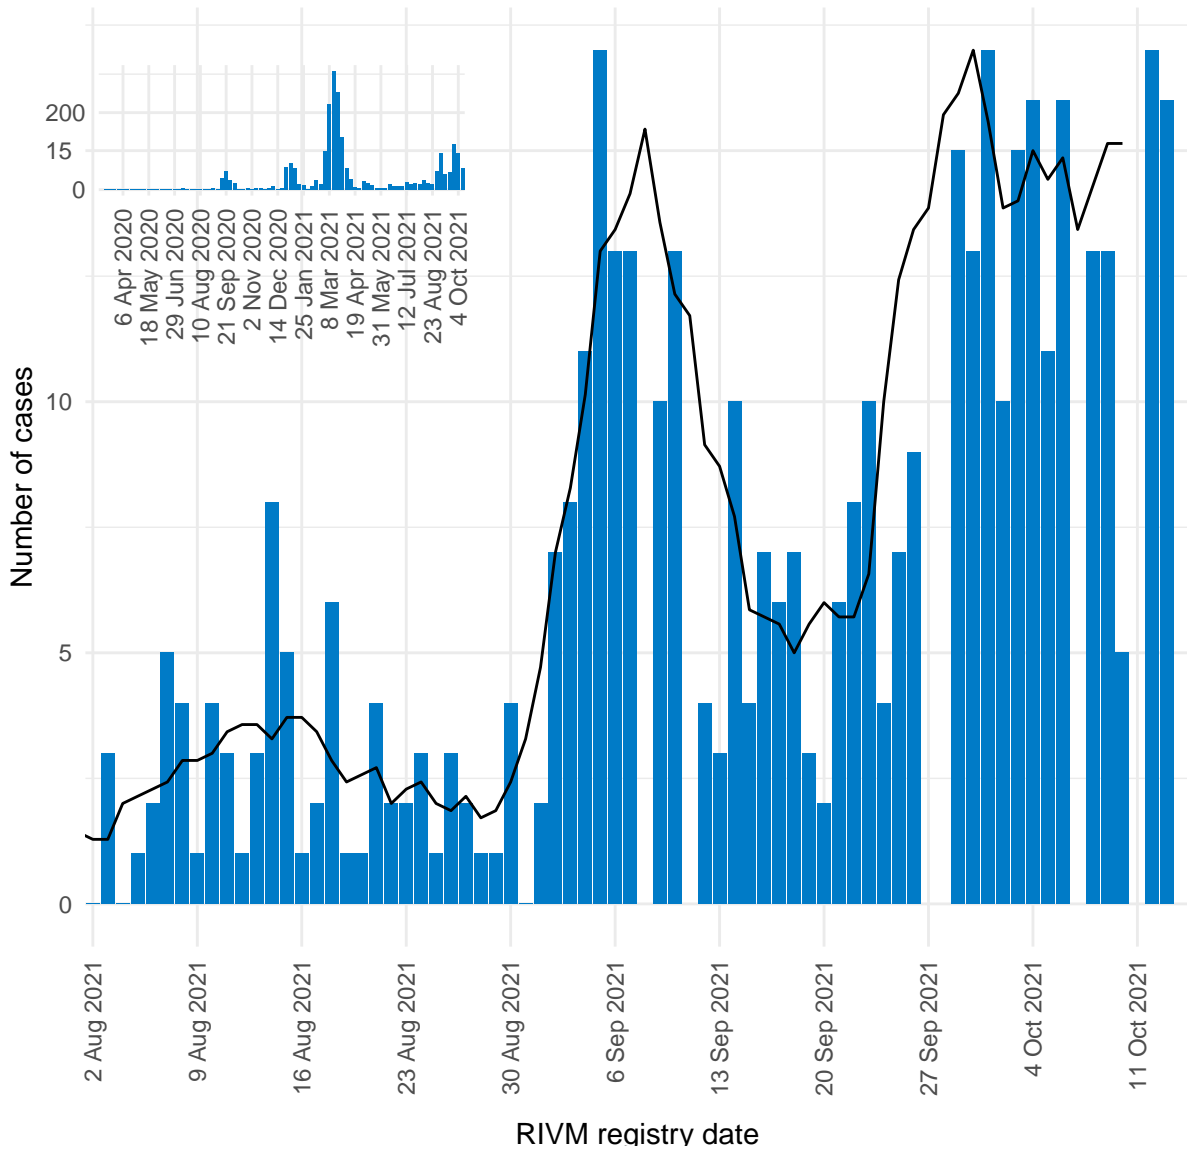

Figure 3: Number of daily reported SARS-CoV-2 cases on Bonaire, presented by RIVM registry date^{1,2}.

¹ This figure displays the daily number of new SARS-CoV-2 by date of reporting to the RIVM. The black line represents the 7-day moving average of new infections. The vertical axes of figures 2-7 differ due to dissimilarities in the quantity of cases between the islands.

² The reported data has been presented by the date of reporting to the RIVM. These numbers can lag behind when the most recent data has not yet been reported to the RIVM.

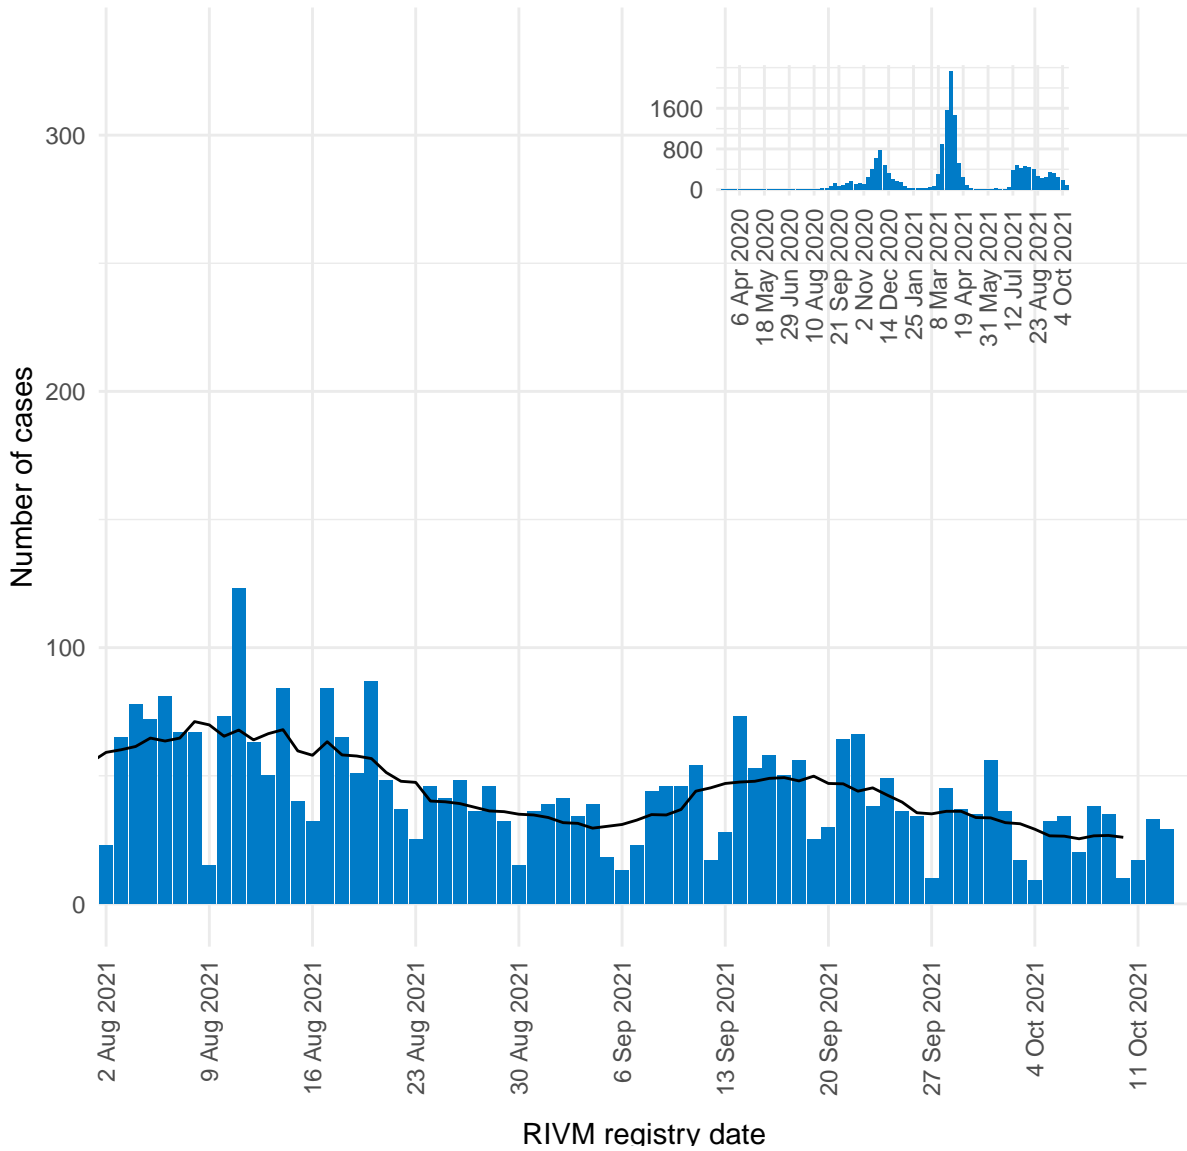

Figure 4: Number of daily reported SARS-CoV-2 cases on Curaçao, presented by RIVM registry date^{1,2}.

¹ This figure displays the daily number of new SARS-CoV-2 by date of reporting to the RIVM. The black line represents the 7-day moving average of new infections. The vertical axes of figures 2-7 differ due to dissimilarities in the quantity of cases between the islands.

² The reported data has been presented by the date of reporting to the RIVM. These numbers can lag behind when the most recent data has not yet been reported to the RIVM.

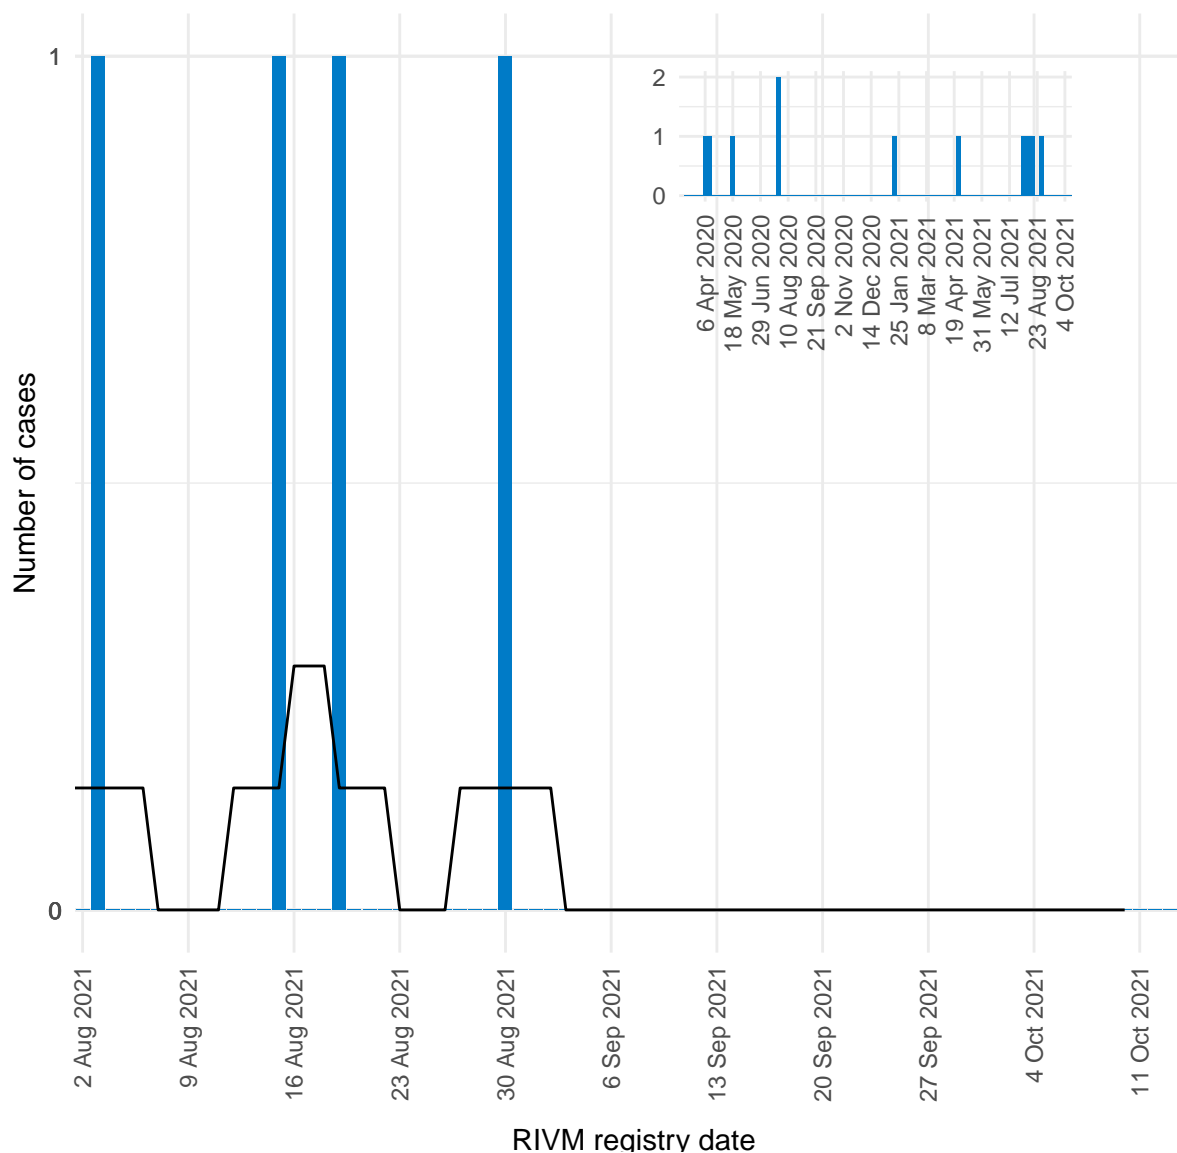

Figure 5: Number of daily reported SARS-CoV-2 cases on Saba, presented by RIVM registry date^{1,2}.

¹ This figure displays the daily number of new SARS-CoV-2 by date of reporting to the RIVM. The black line represents the 7-day moving average of new infections. The vertical axes of figures 2-7 differ due to dissimilarities in the quantity of cases between the islands.

² The reported data has been presented by the date of reporting to the RIVM. These numbers can lag behind when the most recent data has not yet been reported to the RIVM.

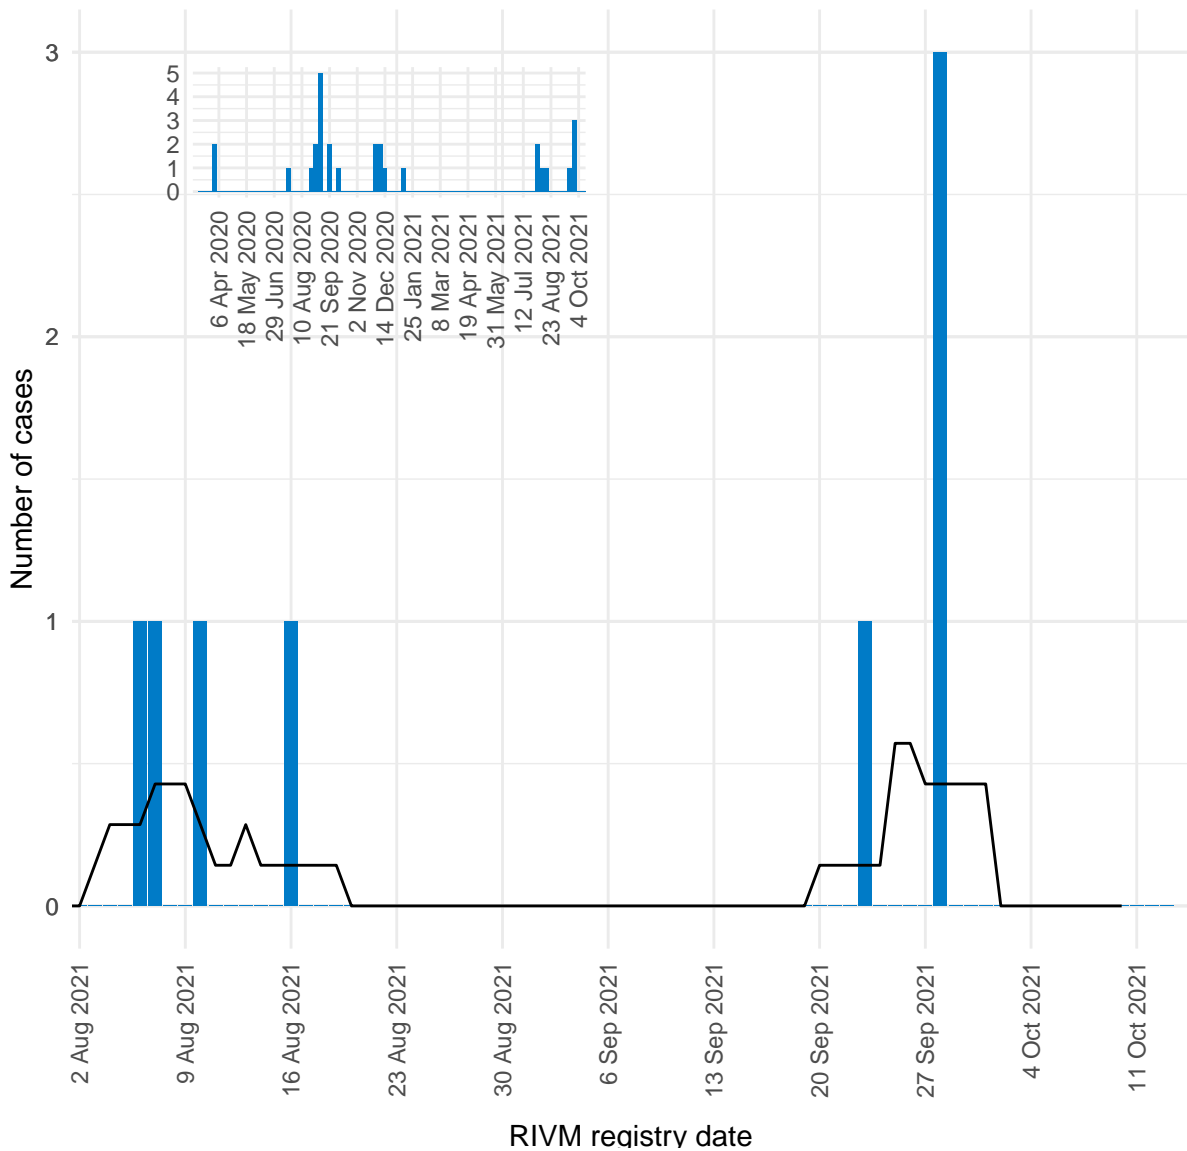

Figure 6: Number of daily reported SARS-CoV-2 cases on St Eustatius, presented by RIVM registry date^{1,2}.

¹ This figure displays the daily number of new SARS-CoV-2 by date of reporting to the RIVM. The black line represents the 7-day moving average of new infections. The vertical axes of figures 2-7 differ due to dissimilarities in the quantity of cases between the islands.

² The reported data has been presented by the date of reporting to the RIVM. These numbers can lag behind when the most recent data has not yet been reported to the RIVM.

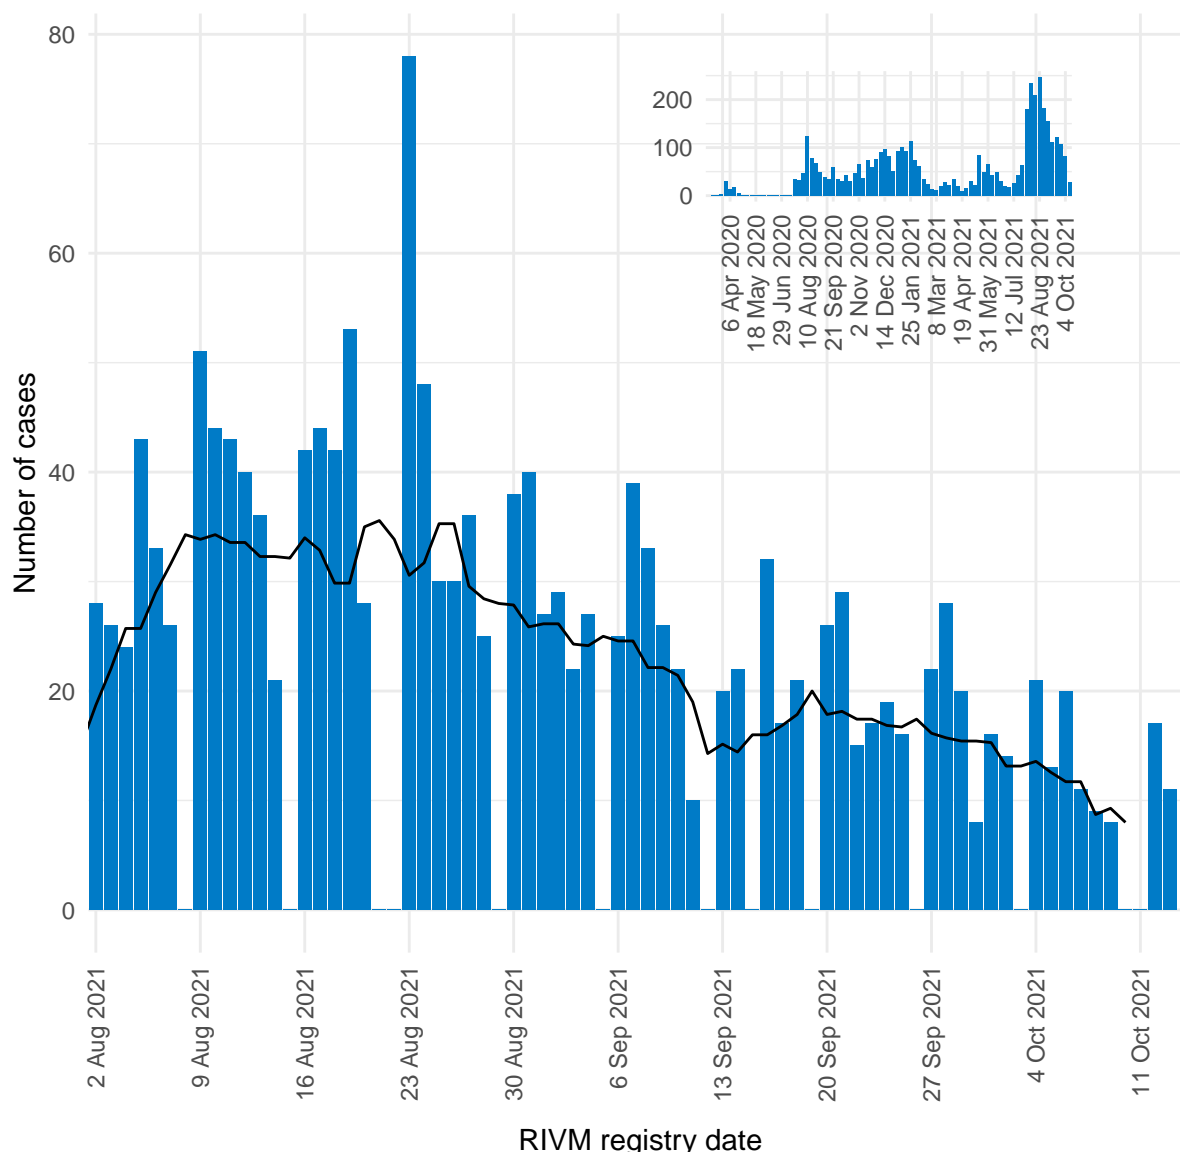

Figure 7: Number of daily reported SARS-CoV-2 cases on Dutch St Maarten, presented by RIVM registry date^{1,2}.

¹ This figure displays the daily number of new SARS-CoV-2 by date of reporting to the RIVM. The black line represents the 7-day moving average of new infections. The vertical axes of figures 2-7 differ due to dissimilarities in the quantity of cases between the islands.

² The reported data has been presented by the date of reporting to the RIVM. These numbers can lag behind when the most recent data has not yet been reported to the RIVM.

3 SARS-CoV-2 three week average incidence rate, progression over time

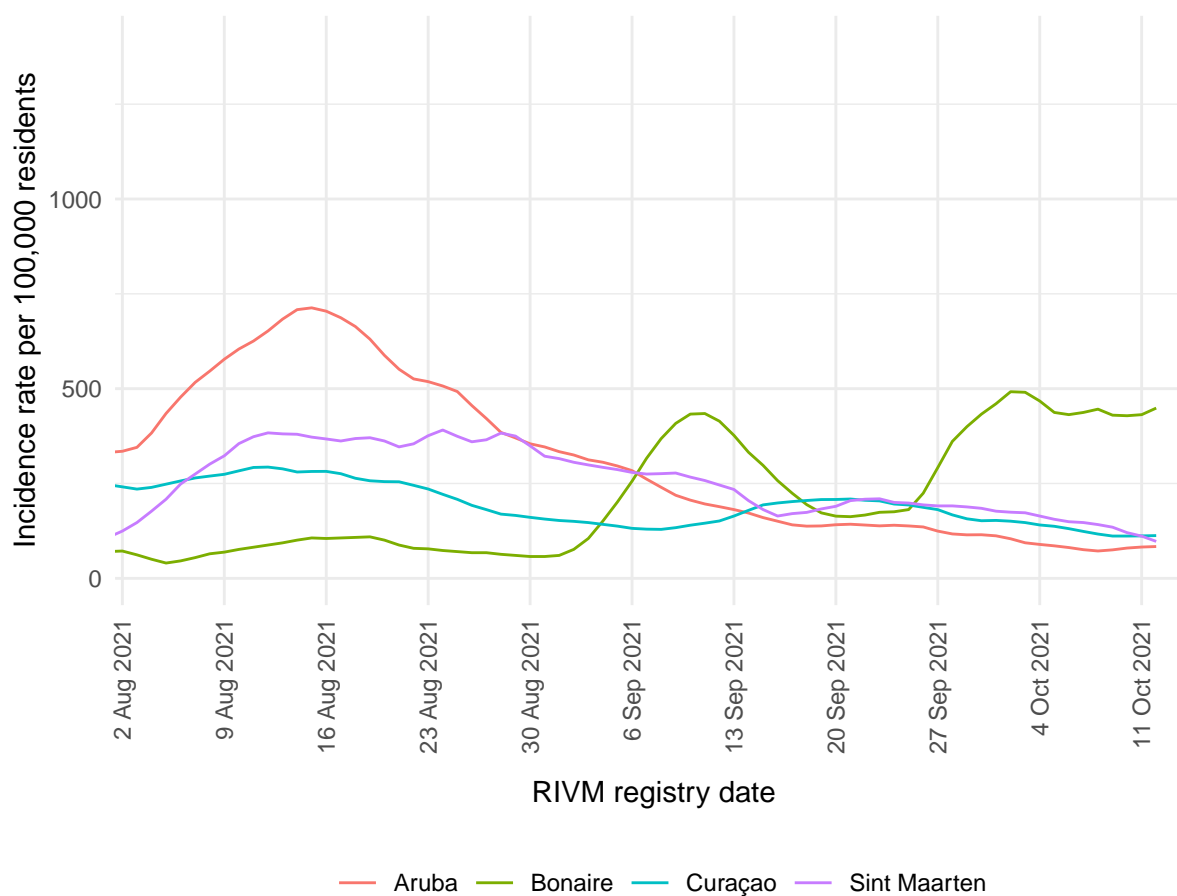

Figure 8: Three week average number of reported cases per 100,000 residents by RIVM registry date, on Curaçao, Aruba, Dutch St Maarten, and Bonaire^{1,2}.

¹ This figure displays the 3-week average incidence rate per island per 100,000 residents, including the population of undocumented migrants on each island. Each line on the vertical axis indicates a weekly average of the incidence rate (defined as the number of new cases per 100,000 persons per week, over the total population) over a period of three weeks. For example: the reported value on January 4th 2021, is the weekly average of the incidence rate between December 28th, 2020 and January 11th, 2021.

² Due to the small number of reported cases on Saba and St Eustatius, these islands have not been included in this figure.

4 Number of COVID-19 vaccine doses administered on the CAS-BES islands

Table 6: Number of first and second doses of COVID-19 vaccine administered until 11 October 2021¹.

	Aruba	Bonaire	Curaçao	Saba	Sint Eustatius	Sint Maarten ²
Number of persons who have received their first dosis (aged 12+ years)	81538	16523	98611	1573	1476	26319
Number of persons who have received their first and second dosis (aged 12+ years)	75492	14449	90260	1555	1427	24051
Number of fully vaccinated persons (aged 12+ years) ³	76299	14449	91223	1555	1427	24051
Number of high risk persons (aged 18-59 years) who have received their first dosis ^{4,5}	4182	-	9188	-	-	4591
Number of fully vaccinated high risk persons (aged 18-59 years) ⁵	3992	-	8524	-	-	2963

¹ The vaccination coverage data presented here is reported by the islands to the Dutch Ministry of Health (VWS) on a weekly basis. These data may lag behind from the vaccination coverage data presented by the island officials.

² These data refer to the numbers of vaccinated persons on the Dutch side of St Maarten. Vaccination coverage on the French side of St Martin is reported by Santé Publique France on a weekly basis.

³ The number of fully vaccinated persons is defined as the number of completed vaccinations. This also includes persons who only require one dose of vaccine to be considered as fully vaccinated, due to having a history of SARS-CoV-2 infection. Both Aruba and Curaçao are reporting these data separately from the number of persons who have received two doses of vaccine. Dutch St Maarten and the BES-islands are currently not reporting these data. The number of completed vaccinations on those islands may therefore be an underestimation.

⁴ For the BES islands, no information was collected about high- and low-risk groups, because all residents within this age group could register for a vaccination at the same time.

⁵ Vaccination data for persons aged 60+ cannot be displayed here because these data are not reported to RIVM.

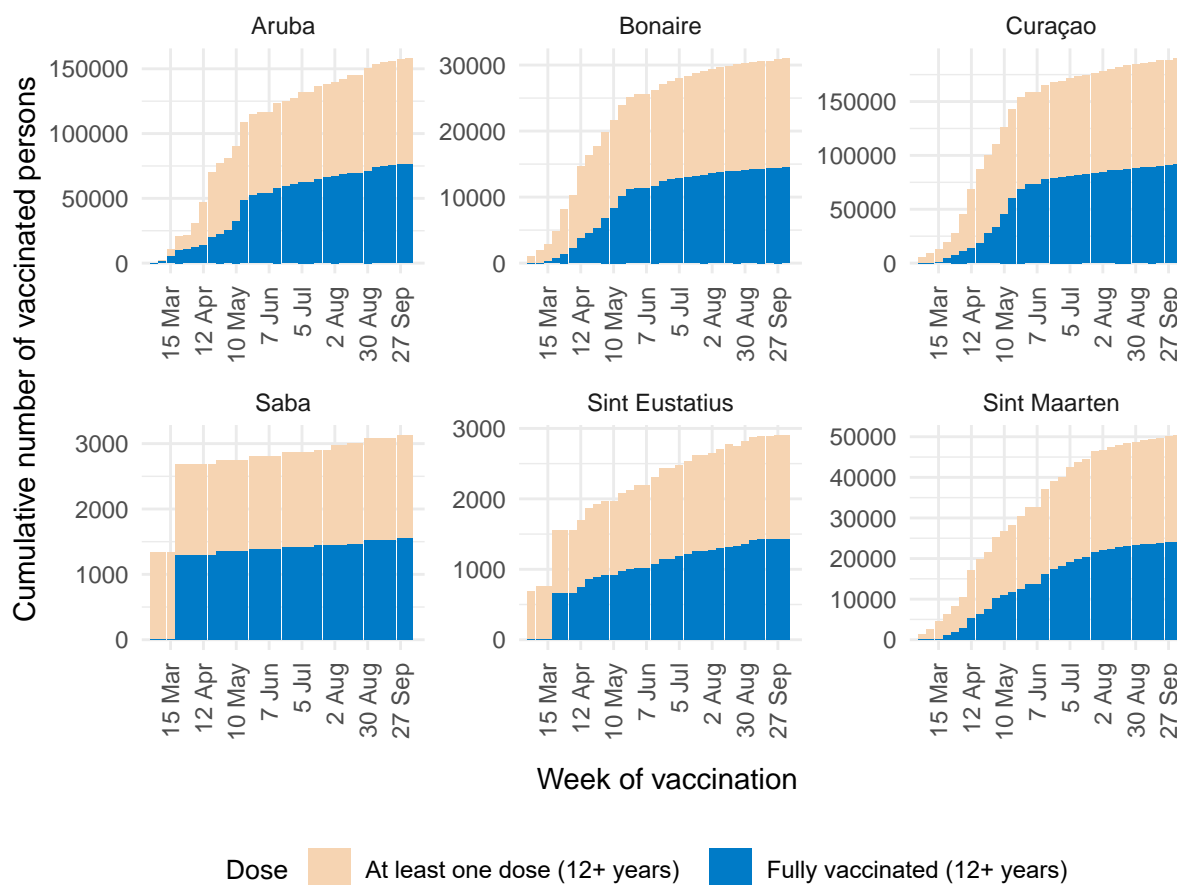

Figure 9: Number of first and second doses of COVID-19 vaccine administered, cumulative by vaccination date, until 11 October 2021^{1,2,3}.

¹ The vaccination coverage data presented here is reported by the islands to VWS on a weekly basis. These data may lag behind from the vaccination coverage data presented by the island officials.

² These data refer to the numbers of vaccinated persons on the Dutch side of St Maarten. Vaccination coverage on the French side of St Martin is reported by Santé Publique France on a weekly basis.

³ The number of fully vaccinated persons is defined as the number of completed vaccinations. This also includes persons who only require one dose of vaccine to be considered as fully vaccinated, due to having a history of SARS-CoV-2 infection. Both Aruba and Curaçao are reporting these data separately from the number of persons who have received two doses of vaccine. Dutch St Maarten and the BES-islands are currently not reporting these data. The number of completed vaccinations on those islands may therefore be an underestimation.

5 Vaccination coverage on the CAS-BES islands

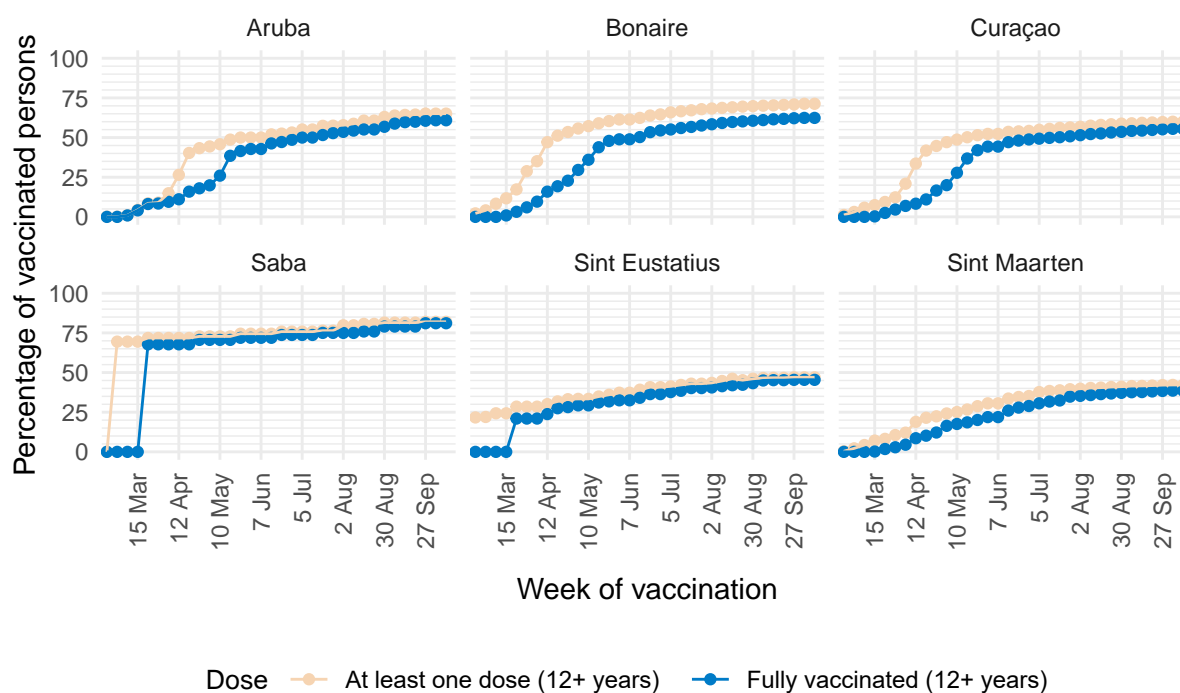

Figure 10: Percentage of residents aged 12 years or older who have received at least one vaccination dose and the percentage of residents aged 12 or older who have been fully vaccinated according to the current vaccination schedule of the vaccines used¹⁻⁴.

¹ The vaccination coverage data presented here is reported by the islands to VWS on a weekly basis. These data may lag behind from the vaccination coverage data presented by the island officials.

² These data refer to the numbers of vaccinated persons on the Dutch side of St Maarten. Vaccination coverage on the French side of St Martin is reported by Santé Publique France on a weekly basis.

³ The vaccination coverage is defined as: Persons aged 12+ who have received at least one dose. A one-dose schedule is sufficient for persons who have indicated that they have demonstrably experienced COVID-19 in the past six months. They are included in the 'fully vaccinated' percentages presented in this figure. These numbers are reported separately per week 21 by Curaçao and week 22 by Aruba.

⁴ The number of fully vaccinated persons is defined as the number of completed vaccinations. This also includes persons who only require one dose of vaccine to be considered as fully vaccinated, due to having a history of SARS-CoV-2 infection. Both Aruba and Curaçao are reporting these data separately from the number of persons who have received two doses of vaccine. Dutch St Maarten and the BES-islands are currently not reporting these data. The number of completed vaccinations on those islands may therefore be an underestimation.
