De data uit de kiemsurveillance worden wekelijks bijgewerkt. Er kunnen t/m week 44 van 2021 af en toe nog nieuwe meldingen komen vanuit de inzendingen van de laboratoria die (nieuw) meedoen in de kiemsurveillance. Week 45 is nog niet compleet. Daarnaast kunnen aantallen per week afwijken ten opzichte van voorgaande publicaties door updates van afname datum van monsters of door een andere classificering van het monster (bron- en contactopsporing t.p.v. aselecte steekproef) in het registratiesysteem. Deze weekcijfers worden achteraf steeds bijgewerkt.

Met ingang van 12 November 2021 is AY.4.2 door ECDC gescalaerd van VUM naar VOI en wordt daarom vanaf nu meegenomen in deze tabel. B.1.616, B.1.620, B.1.427/429 (Epsilon), P.3 (Theta), B.1.525 (Eta), B.1.526 (Iota), B.1.617.1 (Kappa) en P.2 (Zeta) zijn door zowel WHO en ECDC gedeïscaleerd en worden daarom niet meer vermeld.

*De aantallen van AY.4.2 zijn ook opgenomen in de totale aantallen van de Delta variant (B.1.617.2).
