Pathogen surveillance data is updated weekly. New reports may be added up to and including week 43 of 2021 from the submissions provided by the (current and new) laboratories participating in pathogen surveillance. In any case, the figures for week 44 are not yet complete. In addition, numbers per week may differ from previous publications due to updates of sample collection dates or reclassification of the sample in the registration system (source and contact tracing instead of random sampling). These weekly figures are updated retroactively. As of 12 November, ECDC escalated AY.4.2 from a variant under monitoring (VUM) to a variant of interest (VOI) and therefore included in the table from now on. B.1.616, B.1.620, B.1.427/429 (Epsilon), P.3 (Theta), B.1.525 (Eta), B.1.526 (Iota), B.1.617.1 (Kappa) and P.2 (Zeta) are de-escalated and removed by the WHO and ECDC.

*The numbers for AY.4.2 are also included in the total number of the Delta variant (B.1.617.2)
