Pathogen surveillance data is updated weekly. New reports may be added up to and including week 8 of 2022 from the submissions provided by the (current and new) laboratories participating in pathogen surveillance. In any case, the figures for week 9 (2022) are not yet complete. In addition, numbers per week may differ from previous publications due to updates of sample collection dates or reclassification of the sample in the registration system (source and contact tracing instead of random sampling). These weekly figures are updated retrospectively. As of 26 November 2021, ECDC escalated B.1.1.529 variant of interest (VOI) and is therefore included in the table from now on. AY.4.2, B.1.616, B.1.620, B.1.427/429 (P.1), P.3 (Tetra), B.1.525 (Eta), B.1.526 (Theta), B.1.617.1 (Kappa) and P.2 (Zeta) are de-escalated and removed by the WHO and ECDC. * The number for BA.1, BA.2 and BA.3 are also included in the total number for Omicron-variant (B.1.529).
