Pathogen surveillance data is updated weekly. The numbers for the last few weeks may still change slightly. This is because new reports may be added from data provided by the (current and new) laboratories participating in pathogen surveillance. In addition, numbers per week may differ from previous publications due to updates of sample collection dates or reclassification of the sample in the registration system (source and contact tracing instead of random sampling). Comprehensive data is not yet available for the latest week; these weekly figures are updated retroactively.

As of 26 November 2021, ECDC escalated B.1.1.529 variant of interest (VOI) and is therefore included in the table from now on. AY.4.2, B.1.616, B.1.620, B.1.427/429 (Epsilon), P.3 (Theta), B.1.525 (Eta), B.1.526 (Iota), B.1.617.1 (Kappa) and P.2 (Zeta) are de-escalated and removed by the WHO and ECDC. As of 29 March 2022 B.1.1.7 (Alpha), B.1.621 (Lambda) and C.37 (Mu) are de-escalated and removed by the WHO and ECDC.

* The figures for BA.1, BA.2 BA.3, BA.4 and BA.5 have also been included in the total figures for the Omicron variant (B.1.1.529). The Omicron recombinants have not been included in this category. The figures for XBB are also included in the totals for the Omicron recombinants.

* The figures for BA.2.12.1, BA.2.75, BA.4.6, BF.7, BQ.1 and BQ.1.1 have also been included in the totals for the Omicron variant (B.1.1.529). Figures for BA.2.12.1 and BA.2.75 have also been included in BA.2. Figures for BA.4.6 have also been included in BA.4. Figures for BF.7 and BQ.1 have also been included in BA.5. Figures for BQ.1.1 have also been included in BQ.1. Figures for XBB.1.5 have also been included in XBB.

** An update in the classification process may lead to retroactive changes in the classifications.

§ In week 48, sequences from the Infection Radar survey participants were retroactively added to the samples.
