Welzijn en Sport*

BIJLAGE 3: LIJST MICRO-ORGANISMEN PREZIES

Documentversie: 1.0, 2024

Deze codelijst is geldig voor de volgende PREZIES-modules:

POWI

Lijnsepsis

Prevalentieonderzoek Ziekenhuizen

1 Wijzigingen

In deze paragraaf volgt een opsomming van inhoudelijke wijzigingen in deze versie ten opzichte van de vorige gepubliceerde versie van het document. Doorgevoerde tekstuele aanpassingen worden hier niet benoemd.

- De mogelijkheid om aan te leveren met SNOMED coderingen is toegevoegd.
- De registratie van resistente verwekkers is aangepast

2 Inleiding

De codelijst van micro-organismen is onderverdeeld in bacteriën (paragraaf 2), schimmels (paragraaf 3) en virussen (paragraaf 4).

De codering van de meeste micro-organismen is als volgt: eerste 3 letters van de soortnaam gevolgd door de eerste 3 letters van de speciesnaam. Bijv. STAAUR = *Staphylococcus aureus*

Verder zijn er een aantal bijzondere codes:

CNS = coagulase negatieve staphylokokken

Indien uit een bloedkweek bijv. *Staphylococcus epidermidis* wordt gekweekt en uit een tipkweek coagulase negatieve staphylokokken dan rapporteert u *Staphylococcus epidermidis*.

POLY = polymicrobieel (Indien uit een kweek van bijvoorbeeld wond-, drainvocht of weefsel meer dan twee micro-organismen worden geïsoleerd of de uitslag (faecale) flora vermeld, dan de codering polymicrobieel gebruiken).

GKW = geen kweek gedaan (niet mogelijk bij module POWI)

NEG = kweek negatief (niet mogelijk bij de module POWI en de module Lijnsepsis)

Vanaf 2023 is het mogelijk om de gekweekte micro-organismen via zowel de PREZIES stamlijst als de SNOMED (Systematized Nomenclature of Medicine) stamlijst aan te leveren. Voor de SNOMED stamlijst, zie <https://terminologie.nictiz.nl/art-decor/snomed-ct>. Een aantal bijzondere coderingen staan hieronder vermeld.

| | |
|---|-----------------|
| Geen kweek gedaan (niet mogelijk bij module POWI) | 2667000 |
| Kweek negatief (niet mogelijk bij de module POWI en de module Lijnsepsis) | 264868006 |
| Polymicrobieel | 140791000146108 |

2.1 resistente micro-organismen

Vanaf 2014 moet voor een beperkt aantal micro-organismen aangegeven worden voor welke antibiotica zij resistent zijn.

In de laatste (3^e) kolom van tabel 2 (codelijst bacteriën) staat aangegeven of voor het desbetreffende micro-organisme het resistentiepatroon uitgezocht en ingevuld moet worden.

In september 2023 is deze lijst aangepast op basis van de stand van zaken van dat moment.

3 Codelijst Bacteriën

| Code | Omschrijving | Uitzoeken resistentiepatroon? |
|--------|---|-------------------------------|
| gkw | geen kweek gedaan | |
| neg | kweek negatief | |
| poly | polymicrobieel | |
| cns | coagulase negatieve staphylokokken | |
| acplai | <i>Acholeplasma laidlawii</i> | |
| acpocu | <i>Acholeplasma oculi</i> | |
| acpspp | <i>Acholeplasma species</i> | |
| achxyl | <i>Achromobacter xylosoxidans</i> | |
| achspp | <i>Achromobacter species</i> | |
| acdfer | <i>Acidaminococcus fermentans</i> | |
| acdspp | <i>Acidaminococcus species</i> | |
| acvdel | <i>Acidovorax delafieldii</i> | |
| acvfac | <i>Acidovorax facilis</i> | |
| acvtem | <i>Acidovorax temperans</i> | |
| acvspp | <i>Acidovorax species</i> | |
| acialc | <i>Acinetobacter alcaligenes</i> | Uitzoeken resistentiepatroon |
| aciani | <i>Acinetobacter anitratus</i> | Uitzoeken resistentiepatroon |
| acibau | <i>Acinetobacter baumannii</i> | Uitzoeken resistentiepatroon |
| acical | <i>Acinetobacter calcoaceticus</i> | Uitzoeken resistentiepatroon |
| acihae | <i>Acinetobacter haemolyticus</i> | Uitzoeken resistentiepatroon |
